Provet Cloud 2.0 Release Notes

Developments

- Swedish Fiscal System: we now display a warning on the bottom of the page, when finalized anonymous counter sales have any unpaid amounts.
- Added a Refills table to the client Treatments tab that displays all patient refills.
- Added a no multiplier parameter to the consultation medicine API endpoint, which prevents herd size multiplication on items on farm visit consultations.
- Added Home department filter to patient referral dialog.

Fixes and improvements

- Added new "Species category" field for Bundles template and Bundles search on consultations and estimates page.
- Improved Patient detail page.
- Fixed an issue where an item from a different wholesaler, but with an identical barcode, appears during a price update.
- Fixed command menu in Provet Cloud that now supports translations other than English.
- Added improvements when displaying the consultation's start and end date filters to show regardless of the number of departments in the client and patient search.
- Fixed an issue to ensure that when an entry before inventory entry is created/updated/removed, inventory entry packages/unit values are also updated to ensure calculations are correct.
- Fixed reminder expiry date display.
- Organisation items lookup filters items by species of selected patient, when adding item to invoice.
- Updated consultation status label from "Invoice paid" to "No invoice" when finalizing consultations without charge.
- Fixed item entry total calculations when date for entry with measurement loss is updated.
- The item and bundle pages have been relocated from settings to their own sections on the left sidebar. These pages can now be found under "Catalog".
- Fixed an issue so that now when the system suggests updating the consultation's supervising veterinarian, it also suggests updating the invoice's supervising veterinarian.

- Automatically use item subgroup account number when editing items if the "Require Account Number" setting is active, and the user does not choose a different account number.
- Now use smaller patient pictures in some places to improve loading performance.
- The "Veterinarian" field is now required for creating external laboratory referrals with laboratory gateway.
- Fixed an issue where appointments were being mistakenly linked to unrelated shifts.
- Renamed the permission “Can access Proflow screen settings” to “Can access / edit screens”.
- Fixed an issue with external laboratory referrals, where the gender of the patient had been sent in a seemingly random language to the Solumo laboratory.
- Add option to add instructions for items added through bundle.
- Added functionality to remove user details picture via API 0.1.
- Stock pages are moved from settings to their own section on the left sidebar.
- Fixed an issue where the percentage change log would in some cases be lost when editing a consultation item.
- Fixed a minor issue in the invoice page where certain elements would overlap with the top header.
- Added validations to REST API for item entry creation. Similar validations for related UI.
- Fixed issue where special characters were not shown correctly on online booking appointments, notes, and emails.
- Improved Patient location create/edit dialogue and table. Initially available to beta-testing cloud environments only, with plans to release it to a broader audience in subsequent phases.
- Added a new table and functionality for creating, updating and deleting Patient location attributes. Initially available to beta-testing cloud environments only, with plans to release it to a broader audience in subsequent phases.
- Enable status field for patient locations. Initially available to beta-testing cloud environments only, with plans to release it to a broader audience in subsequent phases.
- Updated clinical notes when added to a draft consultation upon check-in. This is initially available to beta-testing cloud environments. Added to a broader audience in later phases.
- Added logic for Medicine Item fields "Manufacturer data" and "Manufacturer URL", which are used to generate QR code for label printing. Initially available to a limited cohort of beta-testing cloud environments, with an expansion to a broader audience anticipated in subsequent phases.
- Added clickable links to our support phone number located in the user profile.
- Fixed count ordering on Tag data table in settings.
- Fixed an issue where the 'Go back button (formerly titled 'Bundles') would never redirect the user to the bundles page if they were not part of the default 'Admin' permission group.

- Updated filter text in recent consultations.
- Added minor fixes in the consultation status terminology.
- Added functionality to create read-only tags for controlling over API.
- Fixed the issue related to the Tasks menu not closing after clicking 'See all tasks' button.
- Fixed section headers on the Settings page in single department clouds so that they appear on the top of the page as you scroll.
- Fixed an issue with paging issues in the treatment plan dashboard.
- Fixed items search table pagination reset.
- Added ward to serializer for admitting consultations.
- Fixed issues where special characters were not shown correctly in Veterinarian field on the Estimate page.
- Fixed setting key field in the importer for unmapped fields.
- Improved the visibility of the 'Allow changing invoice date' and 'Use consultation's start date as the invoice date' settings by displaying them side by side.
- Fixed an issue where the batch number column was not consistently displayed in cases of printing multiple invoices.
- Added a new digital whiteboard dashboard screen setting to show linked appointments.
- Now the General Ledger transaction rows will be created correctly for an invoicing fee row when the invoicing fee is added to an invoice. This will only take effect for new invoicing fees.
- Added new REST API endpoint for making inventories: /stock/item/{id}/inventory. HTTP GET returns current levels, HTTP POST sets new levels.
- Extended REST API /stock/item/ endpoint with department_level.packages and department_level.units. Details endpoint also shows levels for each location.
- Editing consultation items without previous discounts now checks and adds any applicable discounts.
- Added multi-select fields for filters in the Tags setting table.
- Fixed issue where error message for ID number was not shown in client dialog.
- Fixed an issue where the item edit form would round the item price and minimum price into two decimals, even when the "use precise unit prices" setting was enabled.
- Added NPLID and NPLPACKID in the /eprescription/prescription_item/ Rest API endpoint.
- Add adjust_future_time for treatment plan items mark_done endpoint.
- Fixed an inline error message for duplicate matches when creating a client.
- Added new 'Species' field to bundle templates that can be used to filter when searching for bundles in consultations and estimates.
- Implementation of new Import from list UI design which includes manual import, instant automatic price update, and scheduled price update.
- Fixed bug where incorrect error message is displayed when user resets password.

- Fixed an issue where it wasn't possible to save value for diagnosis in lists when multiple lists were activated.
- Disabled the ability to cancel invoice payments under the "Credit Invoice" type. This displays a warning about it in the dialog which gives you the option to either pay with a credit note, or transfer to prepayments.
- Added a hide option when building templates with form builder.
- Updated the instructions in External Laboratory settings to reflect the current workflow of activation.
- Added validation that all analyses selected on Laboratory referral modal. This must be either for internal or external laboratories.
- Fixed an issue where the subgroup filtering does not work on items that have not had any stock-related events made for them.
- Fixed an issue around fixed-price bundles with a minimum charge in estimates.
- Aligned the design of the appointment overview modal opened from the consultation page to match the design of the appointment overview modal opened from the calendar page. Initially available to beta-testing cloud environments with the draft consultation feature, will be released to a broader audience in later phases.
- Fixed an issue with handling and injection fees that was affecting bundles within bundles.
- Fixed issue where Province field was not displayed correctly in the Client details page.
- Fixed a bug that automatically changed the status of "Lapsed" Health Plan subscriptions to "Suspended" or "Active", when receiving a failed or successful payment respectively.
- Added a field to track patient status independently of consultation status. Will be used in future developments, now is sync with consultation status.
- Fixed potential access control issue related user user-specific text templates.
- Changed alert levels to ensure they are not allowed to go below optimum levels.
- Added content restrictions for filtering on uploads.

Database schema changes

- alerts_notification
    - Added index for columns `recipient_id`, `read`.
- estimate_estimatetemplatespecies
    - New table.
- estimate_estimatetemplate_species
    - New table.
- estimate_estimatetemplate
    - New column `species_category` [json].
- general_presc_prescriptionrepeat
    - New column `refill_expiry_date` [date NULL].

- health_consultationextras
    - New column `patient_status` [integer NULL].
- laboratory_externallaboratoryattachment
    - New column `status` [integer NULL].
    - Added index for column `status`.
- laboratory_externallaboratorybreed
    - New column `created` [datetime(6)].
    - New column `modified` [datetime(6)].
- laboratory_externallaboratorygender
    - New column `created` [datetime(6)].
    - New column `modified` [datetime(6)].
- laboratory_externallaboratoryspecies
    - New column `created` [datetime(6)].
    - New column `modified` [datetime(6)].
- organization_patientlocationattribute
    - New table.
- organization_patientlocation
    - New column `capacity` [integer UNSIGNED NULL].
    - New column `boarding` [bool].
- organization_patientlocation_attributes
    - New table.
- organization_debtlettertemplate
    - New column `client_debt_status_id` [integer NULL].
    - Foreign key reference from `client_debt_status_id` to `organization_customselectoption`.`id`.
