

# Provet Cloud 2.4 Release Notes

## Developments

- Added patient and client information to event titles in the boarding calendar timeline.

## Fixes and improvements

- Improved the tooltip text of the "Field not empty" field in the client and patient details.
- Fixed an issue where the species, breed, and gender mappings were not saved correctly when sending external laboratory referrals.
- Instead of sending users a separate SMS reminder for every expired task, one reminder message is now sent that contains all of the user's expired tasks. In addition, the reminder message title no longer shows the task title.
- Fixed an issue where the import progress status did not update correctly when file import timed out.
- Removed the requirement to lock forms to enable the e-signature functions.
- Fixed an issue where refunding invoice payments sometimes created additional General Ledger entries.
- Added the fields "work\_role\_code" and "is\_admin" to the current user JSON API endpoint.
- Made errors shown when sending external laboratory referrals more user-friendly.

## Database schema changes

- label\_print\_proprint
  - New table.
- label\_print\_labeldevice
  - New column `proprint\_id` [char(32) NULL].
  - Added index for column `proprint\_id`.
- stock\_batchimport
  - New column `parent\_id` [integer NULL].

- Foreign key reference from `parent\_id` to `stock\_batchimport`.`id`.
  - Modified type for column `external\_id` to [integer NULL].
- tag\_tagtext
  - New column `in\_item` [bool].
  - Added index for column `in\_item`.
